

HR System — Testing Guide

PbHub HRMS — Testing Guide

A walkthrough for testing every screen and flow in the system. Written for non-technical reviewers — no coding required.

What you'll need: a web browser (Chrome, Safari, Edge, or Firefox) and the URL the team gave you (likely `http://localhost:3000` if you're testing locally).

How to use this guide

For each section:

1. **Log in** as the user listed at the top of the section.
2. **Follow the steps** in order.
3. **Tick the checkbox** when each step works as described.
4. **Note anything** that looks broken, slow, ugly, or confusing — there's a bug-report template at the bottom.

If something doesn't match the description, write down: - Which user you were logged in as - What page (URL) you were on - What you clicked - What you expected vs. what happened - A screenshot if possible

Test accounts

The system comes preloaded with these users. Passwords are simple on purpose — change them once we go live.

Role	Name	Email	Password
Super Admin	Super Admin	admin@pbhub.com	admin123
HR Admin	Bilal Sheikh	bilal.sheikh@pbhub.com	password123
Finance Admin	Usman Tariq	usman.tariq@pbhub.com	password123
Manager (Engineering)	Sara Khan	sara.khan@pbhub.com	password123
Manager (Product)	Fatima Hussain	fatima.hussain@pbhub.com	password123
Employee	Ali Ahmed	ali.ahmed@pbhub.com	password123
Employee	Ayesha Malik	ayesha.malik@pbhub.com	password123
Employee (junior)	Hamza Iqbal	hamza.iqbal@pbhub.com	password123
Employee	Zainab Raza	zainab.raza@pbhub.com	password123

Tip: Use a different browser window (or a private/incognito window) for each role so you don't have to keep logging in and out.

1. Login & layout

Logged in as: anyone

Open the URL. You should see a login page with the PbHub logo.

Type the email and password, click **Log In**.

If the user belongs to one organization, they go straight to the dashboard.

If they belong to more than one (currently only Super Admin), a screen appears asking to pick an organization. Pick **PbHub** and continue.

Sidebar (left): dashboard, employees, attendance, leave, expenses, payroll, performance, recruitment, onboarding, notifications, settings (visible items depend on role — that's expected).

Top bar (right): organization switcher (if you belong to more than one), notification bell, theme toggle (sun/moon icon), user dropdown.

Theme toggle: click the sun/moon icon. Cycles light → dark → system. Reload the page — the theme should stick.

Org switcher (Super Admin only): the seeded super admin belongs to two organizations. Click the org name in the top bar — you see a dropdown with both. Pick the other one — sidebar / branding refresh to the new org. Switch back.

Floating button (bottom-right): a small primary-coloured circle. Click it to open the **Quick Actions** panel.

What to flag

- Login button does nothing or shows generic error → bug

- Sidebar shows links the role shouldn't have (e.g. an employee seeing **Settings**) → bug
 - Tab title in the browser still says "PbHub HRMS" instead of the page name → bug
-

2. Dashboard

Logged in as: each role, one at a time.

The dashboard changes depending on who you are:

- **Super Admin / HR Admin:** company-wide stats (employees, leave today, attendance, recent activity).
- **Finance Admin:** finance-focused widgets (payroll cycles, pending reimbursements).
- **Recruiter:** recruitment metrics (open requisitions, pipeline).
- **Manager:** team focus (your team's attendance today, pending approvals).
- **Employee:** personal cards (today's attendance, leave balance, pending tasks).

Steps:

Log in as **Super Admin**, confirm you see organization-wide numbers.

Log in as **Bilal (HR Admin)** — should look similar to super admin.

Log in as **Sara (Manager)** — should focus on her team.

Log in as **Hamza (Employee)** — should show personal cards only.

On any role with profile completeness < 80%, a banner appears at the top suggesting fields to fill.

Click it — it should jump to **Profile**.

3. Profile

Logged in as: any user (try a few).

Click your avatar in the top-right → **Profile** (or open the **Profile** link from the sidebar).

Profile completeness card appears at the top with a percentage and "Missing: ..." hint.

Profile photo: hover over the avatar → a camera icon appears → click → file picker opens.

Pick any image (PNG/JPEG). The photo updates within a second; you see a "Profile photo updated" toast.

Refresh the page — the photo should still be there.

Try uploading a giant file (over 5 MB) — should show an error, not crash.

Inline edit (pencil icon): hover over a field like first name. A pencil appears. Click it, type, hit Enter — the value saves.

Press **Esc** while editing — should cancel without saving.

Change password form: enter current + new + confirm. Should work and log you out / require re-login.

Download ID Card button (NEW): click it → a branded PDF downloads. Open it. It should show:

- Org logo + name in a coloured header band
- Your photo (or initials in a coloured circle if you haven't uploaded one)
- Full name, employee code, designation, department, joining date
- Sized like a credit card (85.6 × 54 mm) — print on a small card if you want a physical copy.

What to flag

- Photo upload spinner gets stuck → bug
- Old photo briefly flickers back after upload → cosmetic
- Inline edit doesn't show a pencil on hover → bug
- Saving a name shows the old value until you refresh → bug
- ID Card PDF won't open / shows "Damaged" → bug
- ID Card PDF shows white-on-white text or wrong colours → bug

4. Employees

4a. Employee list

Logged in as: Bilal (HR) or Super Admin.

Sidebar → **Employees**.

Table of all employees with code, name (with avatar to the left), department, designation, status pill.

On a small screen / mobile, the table converts to cards.

Search: type "sara" — table filters live.

Filters: by department, by status, by designation. Try one, then **Clear filters**.

Bulk export: tick checkboxes on a few rows → sticky bar appears with "Export CSV". Click it. CSV downloads with the selected employees.

Sorting: click a column header (e.g. **Name**). Order should flip with each click.

Pagination: if more than one page, navigate using the page controls at the bottom.

Logged in as: Sara (manager).

Sidebar → **Employees**.

You should ONLY see your team members (Ali, Ayesha, Hamza), not the full company.

4b. Add employee

Logged in as: Bilal.

On the Employees list, click **Add Employee** (top-right).

Fill in: code, first/last name, email, department, designation, joining date, etc.

Click **Add Employee** at the bottom. Spinner shows during submit.

You're redirected to the new employee's detail page. Toast confirms.

4c. Edit / view employee

Open any employee's detail page. Identity card at top with avatar, name, designation.

Edit button → opens edit page. Change phone or department. Save.

On the edit page, the **avatar uploader** (camera icon overlay on hover) lets you upload/replace a photo.

Back on the list, the new photo appears in that row.

4d. Deactivate employee

Logged in as: Bilal.

On an employee's detail page, click **Deactivate**.

A warning confirm dialog appears.

Confirm. Employee status changes to **Inactive**.

On the list, the inactive employee shows in muted style or hidden by the filter (depending on filter setting).

4e. Departments

Logged in as: Bilal.

Sidebar → **Employees** → **Departments**.

List of departments: ENG, HR, FIN, etc.

Click **New Department**. Fill in code + name. Save.

Deactivate an unused department → confirm dialog → confirm.

Empty states show a friendly CTA when no departments match the search.

4f. Designations

Logged in as: Bilal.

Sidebar → **Employees** → **Designations**.

Same flow as departments: list, search, add, deactivate.

4g. Org chart

Logged in as: Bilal or Super Admin.

Sidebar → **Employees** → **Org Chart**.

You see a visual tree of the reporting hierarchy. Top: people without a manager. Below them, their reports. And so on.

Each card shows avatar, name, designation.

Click a card → jump to that employee's detail.

4h. Custom Schedule (per-employee time override) — NEW

Logged in as: Bilal (HR) or Super Admin.

Some employees don't follow the standard policy hours (e.g. Sara is on a 10-to-7 shift, Hamza works Tue–Sat). The Custom Schedule section lets you override per employee.

Open any employee's detail page → **Edit**.

Scroll to the **Custom Schedule** section (collapsible — click to expand).

Enter a custom **Start time** and **End time** (e.g. 10:00 → 19:00).

Pick **Working days** (chips for Mon–Sun; tap to toggle).

Optionally adjust **Grace late** and **Grace early** in minutes.

Click **Save**.

Switch to that employee, click **Check in** — the off-day banner and late/early calculations should now follow the override, not the standard policy.

Click **Reset to policy default** — wipes the override; back to standard policy.

4i. Performance notes per employee — NEW

Logged in as: Sara (manager) or Bilal (HR).

Open Hamza's detail page (he reports to Ali → who reports to Sara, so Sara is in his chain).

You see a **Performance notes** card.

Type a note ("Great handling of the recent migration deadline."), tick **Private** (default on), click **Add note**.

Note appears with your name + timestamp.

Log in as **Hamza** himself, open his profile / detail page — he should NOT see the private note.

Log in as Sara, post another note with **Private** unticked.

Log in as Hamza — he NOW sees this public note.

What to flag

- Avatars don't load (broken image icon) → bug
- Manager (Sara) sees employees outside her team → permission bug
- CSV export doesn't include the rows you selected → bug
- Org chart loops or shows a person twice → data bug
- Custom Schedule saved but check-in still uses standard policy → bug
- Private performance note visible to the subject employee → privacy bug

5. Attendance

The attendance system is **strict mode**: one check-in and one check-out per day. After check-out, the day is locked until tomorrow.

5a. Quick Actions widget (every role with check-in permission)

Click the floating button at bottom-right. A panel opens showing today's date.

Status section says "Not started" with a "Check in" button.

Click **Check in**.

- Browser may ask for location permission — it's optional. Click **Allow** to share location, or **Block** to skip.
- After 1–4 seconds, the panel updates to **Working** with a live counter ("0m" growing every minute).

Close the widget (X button at top-right of the panel) and reopen — status should still be **Working**.

Try clicking check-in again somewhere else (e.g. via Cmd+K → "Check in") — should fail with **"Already checked in today"**.

Click **Check out**. Panel changes to "Day complete" with a green tick, your start/end times, and total worked minutes.

Now the panel hides the buttons and shows just the summary — try checking in again, the widget shouldn't let you.

5b. Attendance page (/attendance)

In the sidebar, click **Attendance** → **Check In / Out** (or just **Attendance**).

You see today's date, current time, the same status card, and **Today's Summary** with status (PRESENT / WEEKEND / HOLIDAY etc).

Below: a list of your check-in/out logs. Each log shows time, IP, source (WEB), and small chips for **device + location** (if you allowed location).

Click a location chip — opens Google Maps in a new tab at that point.

5c. Off-day banner (weekend / holiday)

Today (2026-05-04) is a Monday — a normal working day. To test the banner:

Either wait for a weekend, OR temporarily change your computer's date forward to a Saturday (with everyone's permission first), OR ask the dev team to add a fake holiday for today.

On a weekend or holiday, the Quick Actions panel and /attendance page show a friendly **"Weekend"** or **"Holiday — [name]"** card instead of the check-in button.

There's a small **Check in anyway** link below for people who do work weekends.

5d. Daily summary (managers / HR)

Logged in as: Bilal (HR Admin) or Super Admin.

Sidebar → **Attendance** → **Daily Summary**.

You see a table with every employee, today's status (PRESENT / WEEKEND / etc), check-in time, check-out time, worked minutes.

Use the **date range picker** at the top — try “Last 7 days”, “This month”, custom range. Table updates.

Try **Search** — type “sara”. Table filters live.

5e. Attendance corrections

Logged in as: Hamza (employee).

Sidebar → **Attendance** → **Corrections**.

Click **Submit correction** (or whatever button creates a new request).

Pick a date in the past, enter requested time, write a reason. Submit.

Toast: “Correction submitted”.

Switch to: Bilal (HR Admin).

Sidebar → **Attendance** → **Corrections**.

You see Hamza's request. Click **Approve** — confirm dialog appears.

Confirm. Status changes to APPROVED.

5f. Attendance policies

Logged in as: Bilal.

Sidebar → **Attendance** → **Policies**.

List of policies (e.g. “Standard 9-to-6”). Each shows type (FIXED / FLEXIBLE), working days, grace minutes.

Click into one. You see assigned employees on the right.

Assign an employee → toast → row appears.

Remove assignment → red confirm dialog.

Create a new policy with custom hours (e.g. 10-to-7) and a few working days.

Deactivate a policy → confirm dialog (red).

5g. Attendance reports

Logged in as: Bilal or Super Admin.

Sidebar → **Attendance** → **Reports**.

Pick a month from the **month selector** at the top.

Table per employee: present days, late days, absent, on-leave, weekend, holiday, total worked hours.

Numbers should add up to total days in the month.

What to flag

- After check-out, the page still shows a check-in button → bug
- Worked time on the panel goes backwards or stuck at 0 → bug
- Admin daily summary missing employees who didn't check in → expected on a working day (will show as ABSENT after the next overnight job runs); if dates are weeks old and still missing → bug
- Reports show negative numbers or numbers > total days in month → bug

6. Leave

6a. Apply for leave (employee)

Logged in as: Hamza.

Sidebar → **Leave** → **Requests**.

Click **New Request** (top-right).

Pick a leave type (Annual, Sick, Casual...), start date, end date.

Type a reason ("Family event").

Click **Submit**. Should show a spinner during submit, then a success toast.

You see the new request in the list with status **PENDING**.

Click on the request — you should be taken to a detail page showing all info.

Click **Cancel request** → confirm dialog appears asking to confirm.

Confirm. Status changes to **CANCELLED**.

6b. Approve leave (manager)

Logged in as: Sara (Hamza's manager via EMP001 → EMP002 → EMP004 chain).

Open the **Inbox** from the sidebar — you see pending leave requests for your team.

Click on Hamza's request. Detail page opens.

Click **Approve**. Confirm dialog. Confirm. Status → **APPROVED**.

Try **Reject** on another pending request — confirm dialog should be red ("danger" tone) with a remarks field.

6c. Bulk approve

Logged in as: Sara or Bilal.

Sidebar → **Leave** → **Requests** → switch view to **Pending Approvals**.

Tick checkboxes on 2–3 pending rows.

A sticky bar appears at the bottom: “X selected · Approve all · Reject all · Clear”.

Click **Approve all** — confirm dialog. Confirm.

Toast at the end: “Approved X requests” (or “Approved X of Y — 1 failed” if any fail).

6d. Calendar view

Logged in as: Sara or Bilal.

Sidebar → **Leave** → **Requests** → switch view to **All Requests**.

At the top there’s a toggle: **List | Calendar**. Click **Calendar**.

You see a month grid. Each leave shows up as a coloured bar with employee name + leave type.

Click on a date — list view filters to leaves covering that day.

Click **Clear date filter** to undo.

Use the < and > arrows to navigate months. Click **Today** to jump back.

Holidays show as a thin coloured strip at the top of cells.

6e. Leave balances

Logged in as: any employee.

Sidebar → **Leave** → **Balances**.

Table of leave types with **Total**, **Used**, **Remaining** columns.

After applying for leave (5a), the **Used** count should reflect pending + approved.

6f. Holidays

Logged in as: Bilal.

Sidebar → **Leave** → **Holidays**.

List of holidays with date, name, optional/mandatory flag.

Click **Add Holiday**. Fill in date + name. Save. Should appear in the list.

Click **Deactivate** on a holiday → confirm dialog → confirm. Holiday hides from the list.

6g. Leave policies

Logged in as: Bilal.

Sidebar → **Leave** → **Policies**.

List of policies (Annual, Sick, Casual, Maternity).

Click into a policy → detail page with assignment list.

Assign an employee to a policy → toast → assignment appears.

7. Expenses

7a. Submit a claim with receipt

Logged in as: Hamza.

Sidebar → **Expenses** → **Claims** (or similar).

Click **New Claim / Submit Claim**.

Fill in title, total amount, category, etc.

Add Item to add expense items. Each item has its own receipt upload.

Drag a PDF or image into the **drop area** for the receipt. (Or click to browse.)

You see “Uploading...” then a green checkmark “Uploaded receipt.png”.

Click **Remove** to test that path — receipt clears, dropzone reappears.

Re-upload. Submit the claim.

Toast: “Claim submitted”.

7b. View a claim

Click your new claim from the list.

Detail page shows items, amounts, receipt thumbnails.

Click a thumbnail → opens the receipt in a new tab.

If the receipt is a PDF, you see a  icon instead of a thumbnail.

7c. Approve a claim (manager / finance)

Logged in as: Sara (manager).

Inbox shows the new claim.

Click into it. Approve. Confirm dialog. Confirm.

Status changes to **MANAGER_APPROVED** (or similar — passes to finance).

Switch to: Usman (finance).

Inbox shows the manager-approved claim.

Click into it. Approve again as finance.

Now it's ready for **reimbursement**.

Click **Mark Reimbursed**. Confirm dialog. Status → **REIMBURSED**.

7d. Bulk approve

Logged in as: Sara or Usman.

Sidebar → **Expenses** → **Claims** → switch to pending view.

Tick 2–3 claims. Sticky bar at bottom → **Approve all**. Confirm. Toast summary.

7e. Categories & policies

Logged in as: Bilal or Usman.

Sidebar → **Expenses** → **Categories**: add a category, deactivate one (with confirm dialog).

Sidebar → **Expenses** → **Policies**: similar.

8. Payroll

8a. View own payslip (employee)

Logged in as: Ali.

Sidebar → **Payroll** → **My Payslips**.

You see a list of your past payslips by month.

Click the latest. Detail page shows breakdown (basic, allowances, deductions, net).

Click **Download PDF**. A branded PDF should download with the org logo.

8b. Cycle management (HR / Finance)

Logged in as: Usman.

Sidebar → **Payroll** → **Cycles**.

List of cycles (one per month).

Click **Create Cycle**. Pick a month. Save.

Click into the new cycle. **Generate Payroll** button.

Click → it computes payslips for everyone (might take a few seconds).

Review individual payslips inline.

Finalize the cycle. Confirm dialog (warning tone). Confirm.

After finalize: payslips are visible to employees; cycle is locked.

Try **Regenerate** on a finalized cycle — should warn.

8c. Salary components — with formulas (UPDATED)

Logged in as: Usman.

Sidebar → **Payroll** → **Components**.

Click **New Component**. Fill in code (e.g. **BASIC**), name, type (EARNING/DEDUCTION).

Formula dropdown (NEW): pick **% of CTC**, **% of Basic**, **% of Gross**, or **Fixed**.

If you picked a percentage type, enter the value (e.g. **60** for 60%).

Save. The list now shows the formula in a “Formula” column (e.g. “60% of CTC”).

Edit an existing component to change its formula type → save → refresh — value persists.

Common setup: - **BASIC** = 60% of CTC - **HRA** = 30% of Basic - **TRAVEL** = Fixed (5,000) - **PF** = 12% of Basic (DEDUCTION)

8d. Salary structure — with live preview (UPDATED)

Logged in as: Usman.

Sidebar → **Payroll** → **Structures** → **Assign / New** for an employee.

Enter a **CTC** at the top (e.g. 200,000).

Tick the components to include (BASIC, HRA, TRAVEL, PF).

Live preview panel updates with each component’s computed amount + a “60% of CTC = 120,000” derivation hint.

Components with a non-Fixed formula are read-only (driven by CTC).

Components with **Fixed** formula get a typed amount input.

Save. The assigned structure persists with the resolved amounts + the CTC value.

8e. Auto-generate payroll from attendance (UPDATED)

Logged in as: Usman.

Open a draft cycle. Click **Generate Payroll**.

A confirm dialog explains: “This will compute payslips for all active employees from their salary structures and {Month} attendance. Loss-of-pay will be applied for unpaid absences.”

Confirm. The system:

- Computes each employee’s expected working days for the month (using their custom schedule override if set, else policy)
- Counts present + paid-leave + holiday + weekend days
- Subtracts a **Loss of Pay** deduction for unpaid absences

Each generated payslip should show line items + an explicit **Loss of Pay** line if any days were absent.

Try generating for a month with mixed attendance (some employees absent) — verify LOP is non-zero only for the absent ones.

8f. Auto-email PDF payslips on Finalize (NEW)

Logged in as: Usman.

On a generated cycle, click **Finalize**.

Confirm dialog. Confirm.

Within seconds, every employee should receive an email titled “**Your payslip for {Month Year}**” with the PDF attached.

Open the email. Subject + body should include the org brand name. PDF amounts should show “PKR ...” formatting.

If an email fails (e.g. employee has no `Account.email` set), the finalize still succeeds — only that one is skipped. Use **Resend emails** (admin-only button) to re-fire.

What to flag

- Live preview shows the wrong total for a known formula (e.g. 60% of 200,000 $\neq$ 120,000) → bug
- LOP deduction missing on a payslip when the employee had absences → bug
- Finalize succeeds but no emails went out → bug (check api logs for SMTP errors)
- PDF attachment is corrupted / 0 bytes → bug

9. Performance

9a. Set a goal (employee)

Logged in as: Ayesha.

Sidebar → **Performance** → **Goals**.

If empty: see a friendly empty state with a button **Set a goal**.

Click → form opens.

Title (“Improve code review velocity”), description, target date. Save.

Goal appears in the list with status **DRAFT**.

9b. Submit goal for approval

Click into the goal. Click **Submit for approval**.

Status → **PENDING_APPROVAL**.

9c. Approve goal (manager)

Logged in as: Sara.

Inbox shows pending goals.

Approve. Status → **APPROVED**.

9d. Performance cycle & reviews

Logged in as: Bilal.

Sidebar → **Performance** → **Cycles**.

Create a cycle (e.g. Q2 2026). Open it. Transition through phases (Self-review → Manager review → Calibration → Closed) — each transition shows a confirm dialog.

10. Tasks (NEW)

A simple task tracker. Managers/HR assign work to employees; employees see what they're responsible for and mark items complete.

10a. Create a task

Logged in as: Sara (manager) or Bilal (HR).

Sidebar → **Tasks**.

Click **New Task**.

Pick assignee (e.g. Hamza), title ("Update CV before Friday"), description, due date, priority (Low/Medium/High/Urgent).

Save. You're redirected back to the list.

10b. Receive + complete a task

Logged in as: Hamza.

Sidebar → **Tasks**.

My Tasks view shows the task Sara just assigned.

Click into it. See title, description, due date, priority.

Click **Mark Complete** (or change status via the dropdown). Confirm dialog appears.

Confirm. Status → **COMPLETED**.

10c. Filter + admin views

As Sara: switch to **Assigned by me** view → see all tasks she's assigned.

As Bilal: there's a third **All tasks** view (HR sees everyone's tasks).

Filter by status (TODO / IN_PROGRESS / COMPLETED / CANCELLED).

An overdue badge appears on past-due non-completed tasks.

What to flag

- Assigning to an employee outside one's team works but shouldn't (depends on perms — HR/manager should be allowed; verify role)
 - Mark Complete doesn't update status → bug
 - Overdue badge missing on past-due tasks → cosmetic bug
-

11. Mail (NEW)

Admin tool for sending one-off emails to employees from inside the HRMS — announcements, policy changes, etc.

Logged in as: Bilal or Super Admin.

Sidebar → **Mail**.

Compose opens a form: **Recipient mode** (All employees / Department / Specific employees), Subject, Body.

Pick **Specific** → search + tick employees you want.

Type a subject and body.

Send → confirm dialog showing recipient count.

Confirm. Toast: "Sent to 3 of 3 recipients" (or X of Y if some failed).

Each picked employee receives the email at their account email. Body wrapped in a branded HTML template (org name + brand colour).

What to flag

- "Specific" picker doesn't include search → bug
 - Send proceeds without a confirm dialog → bug (we want a sanity check before mass-emailing)
 - Email arrives without org branding → cosmetic
 - Sender email address looks wrong → check `MAIL_FROM` env var with the dev team
-

12. Suggestion box (NEW)

Two-sided: employees post suggestions; HR / super admin reviews and responds in an inbox.

12a. Submit a suggestion (employee)

Logged in as: Hamza.

Sidebar → **Suggestions**.

Click **New Suggestion**.

Pick a **Category** (Workplace / Process / Tools / Culture / Compensation / Other).

Title + body.

Anonymous checkbox (default off): if ticked, your name + employee ID won't be visible to admins. Banner explains this.

Submit. You see your own submitted suggestion in the list (named, not anonymous — anonymous ones aren't shown in "My suggestions" because they have no author link).

12b. Admin inbox + respond

Logged in as: Bilal or Super Admin.

Sidebar → **Suggestions** → **Inbox**.

List of every submission with status (OPEN / IN_REVIEW / IMPLEMENTED / DECLINED / ARCHIVED).

Anonymous ones show "**Anonymous**" instead of name — admin literally cannot see who wrote them.

Click into one. Add a response, change status to **IMPLEMENTED** or **DECLINED**, save.

If the suggestion was non-anonymous, the author gets a notification (bell icon + email if mail is wired).

What to flag

- Anonymous submission still shows the author's name → CRITICAL privacy bug
- Status doesn't update after response → bug
- Author of a non-anonymous suggestion doesn't get a notification → bug

13. Recruitment

13a. Create a requisition (manager)

Logged in as: Sara.

Sidebar → **Recruitment** → **Requisitions**.

Click **New Requisition**. Fill in title, department, target start date, headcount, justification. Save.

Status → **PENDING_APPROVAL**.

13b. Approve requisition (HR)

Logged in as: Bilal.

Sidebar → **Recruitment** → **Requisitions**.

Approve Sara's requisition.

13c. Job posting + candidates

Logged in as: Bilal.

Recruitment → **Job Postings** → publish a posting from the requisition.

Recruitment → **Candidates** → add a candidate manually (name, email, current title).

Recruitment → **Applications** → link the candidate to the posting.

Recruitment → **Interviews** → schedule an interview. Add interviewer, time, mode.

Recruitment → **Offers** → create an offer. Send.

14. Onboarding

14a. New hire (HR)

Logged in as: Bilal.

Sidebar → **Onboarding** → **New Hire**.

Pick an employee (or create one). Pick an onboarding template.

An onboarding instance is created with a list of tasks (Sign offer, Set up email, Welcome call, etc.).

14b. My tasks (new hire)

Logged in as: Hamza.

Sidebar → **Onboarding** → **My Tasks**.

You see your assigned tasks. Tick one as **complete**. Some tasks may require a document upload — drag-drop it.

14c. Templates (HR)

Logged in as: Bilal.

Sidebar → **Onboarding** → **Templates**.

Edit / create templates with task lists.

15. Settings

15a. Roles & Permissions (Super Admin only)

Logged in as: Super Admin (`admin@pbhub.com`).

Sidebar → **Settings** → **Roles**.

List of roles (Super Admin, HR Admin, Manager, Finance Admin, Recruiter, Employee).

Click into one. You see toggle switches for every permission — try toggling one off, then back on. Save.

Click **New Role** → create a custom role with a few permissions. Verify it shows in the list.

Deactivate a custom role → confirm dialog.

15b. Users (Super Admin / HR)

Sidebar → **Settings** → **Users**.

List of all users in the org with their roles.

Click on a user. Add or remove roles. Save.

15c. Invitations

Sidebar → **Settings** → **Invitations**.

Click **Invite User**. Enter email, pick a role. Send.

You see the new invitation in the list with status **PENDING**.

Revoke an invitation → red confirm dialog → confirm.

Open the invitation email (check the team's inbox or the dev server logs). The link should let the invitee set up their password.

15d. Branding (your favourite for testing)

Logged in as: Super Admin.

Sidebar → **Settings** → **Branding**.

Three file upload areas: **Logo**, **Favicon**, **Login background**.

Drag-drop a PNG into the **Logo** area. You see “Uploading...” → success.

Same for favicon (small icon) and login background (large image).

Pick a primary colour from the theme picker.

Type a brand name and tagline.

Click **Save**.

Refresh the page — the sidebar logo updates. Open `/login` in a private window — you see the new login background.

Replace an asset by dropping a new file. Old one is replaced.

Remove an asset → its slot empties → save → the old logo is gone.

15e. Notification preferences

Logged in as: any user.

Sidebar → **Notifications** → **Preferences** (or **Settings** → **Notifications**).

Toggle off “Email me when my leave is approved”.

Save. Toast confirms.

16. Inbox

Logged in as: any approver (Sara, Bilal, Usman).

Sidebar → **Inbox**.

Page header shows total pending count.

Sections: **Leave Requests, Expense Claims, Onboarding Tasks, Attendance Corrections**.

Each section shows a count badge and is collapsible.

Quick **Approve / Reject** buttons on each row — Reject opens a red confirm dialog.

After approving, the item disappears from the list.

If you have nothing pending, you see a friendly “You’re all caught up” empty state.

17. Notifications (the bell icon)

Logged in as: any user.

Click the **bell icon** in the top bar. A panel opens with recent notifications (leave approved, expense claim submitted, etc.).

Unread items have a small dot or are highlighted.

Click on a notification — it marks it as read and may navigate you to the related page (e.g. the leave request detail).

Mark all read button clears unread badges.

Open the full **Notifications** page (sidebar or “View all” link). Filter by read/unread, by event type (Leave / Expense / Payroll / etc.).

On the Notifications page header, a link to **Preferences** (covered in §12e) opens the per-event toggle screen.

What to flag

- Bell badge count doesn’t decrease after marking read → bug
 - Clicking a notification opens a 404 or wrong page → bug
 - Unread count out of sync between bell and full page → bug
-

18. Search (Cmd+K / Ctrl+K)

Logged in as: any user.

Press **Cmd+K** (Mac) or **Ctrl+K** (Windows). A search palette opens in the centre.

Type “**sara**” — you see Sara Khan in the **Employees** group.

Press the down arrow + Enter. Takes you to her profile.

Reopen **Cmd+K**. Type “**leave**” — you see Leave Requests navigation, leave actions, and any leave records the user can see.

Type “**check in**” — you see the **Check in** action.

Press **Enter** — should call check-in.

Type “**theme**” — see options to switch to light / dark / system theme.

Esc to close.

19. Mobile / responsive

Switch your browser into mobile view (in Chrome: Right-click → Inspect → toggle device toolbar → pick iPhone 14 or similar).

Sidebar collapses to a hamburger menu (top-left).

Click the hamburger — sidebar slides in from the left.

Tap a link, sidebar closes automatically.

Tables don't overflow horizontally. They convert to **cards** on small screens (one card per row).

Forms (apply leave, new claim, etc.) are usable — buttons not cut off.

The **Quick Actions** floating button sits at bottom-right, doesn't cover important controls.

20. Edge cases worth a try

Permission denied: log in as Hamza, try opening `/settings/roles` directly via URL. Should show a friendly “you don't have permission” message, not a generic error.

Logout: click avatar → **Log out**. You land on the login screen. Now click your browser's **Back** button — you should go back to the login screen, NOT to the protected page.

Password reset: on the login screen, click **Forgot password**. Enter Hamza's email. Open the reset email. Click the link. Set a new password. Log in with the new password.

Session expiry: log in, leave the tab open for 20+ minutes, then click around. The app should silently re-authenticate (using the refresh token) — you should NOT be kicked back to login.

Double-clicks: on any submit button (apply leave, save profile, etc.), double-click rapidly. Should not create duplicate records.

21. Bug report template

When you find something off, copy this template into a Slack message or email:

Bug report

User: <which test account you were logged in as>

Page / URL: <e.g. /leave/requests/new>

Browser: <Chrome / Safari / etc.>

What I did:

1. ...
2. ...
3. ...

What I expected:

<short description>

What actually happened:

<short description; include any error message verbatim>

Screenshot / video: <attach if possible>

Final checklist

Once you've gone through every section above, also confirm:

No screen has the browser tab title stuck on “PbHub HRMS” (each page should have its own title like “Leave Requests · PbHub”).

No console errors when you open the browser **DevTools** (F12 → Console tab) and click around for 5 minutes.

Every destructive button (delete, reject, deactivate) has a confirm dialog.

Every empty list shows a friendly empty state with a CTA, not just “No data”.

Every long-running button shows a spinner so the user knows the click registered.

Need help?

If something doesn't make sense, message the team — don't try to debug technical errors yourself. Just describe what you saw.

Thanks for testing! 🙏
